INTERNET ACCESS
TO PATIENT HEALTH RECORDS

Czech Experience with Implementation of Personal Electronic Health Records

Tomas Mladek, MD

Member of the Board, CNFeH, & CEO, IZIP, Inc.

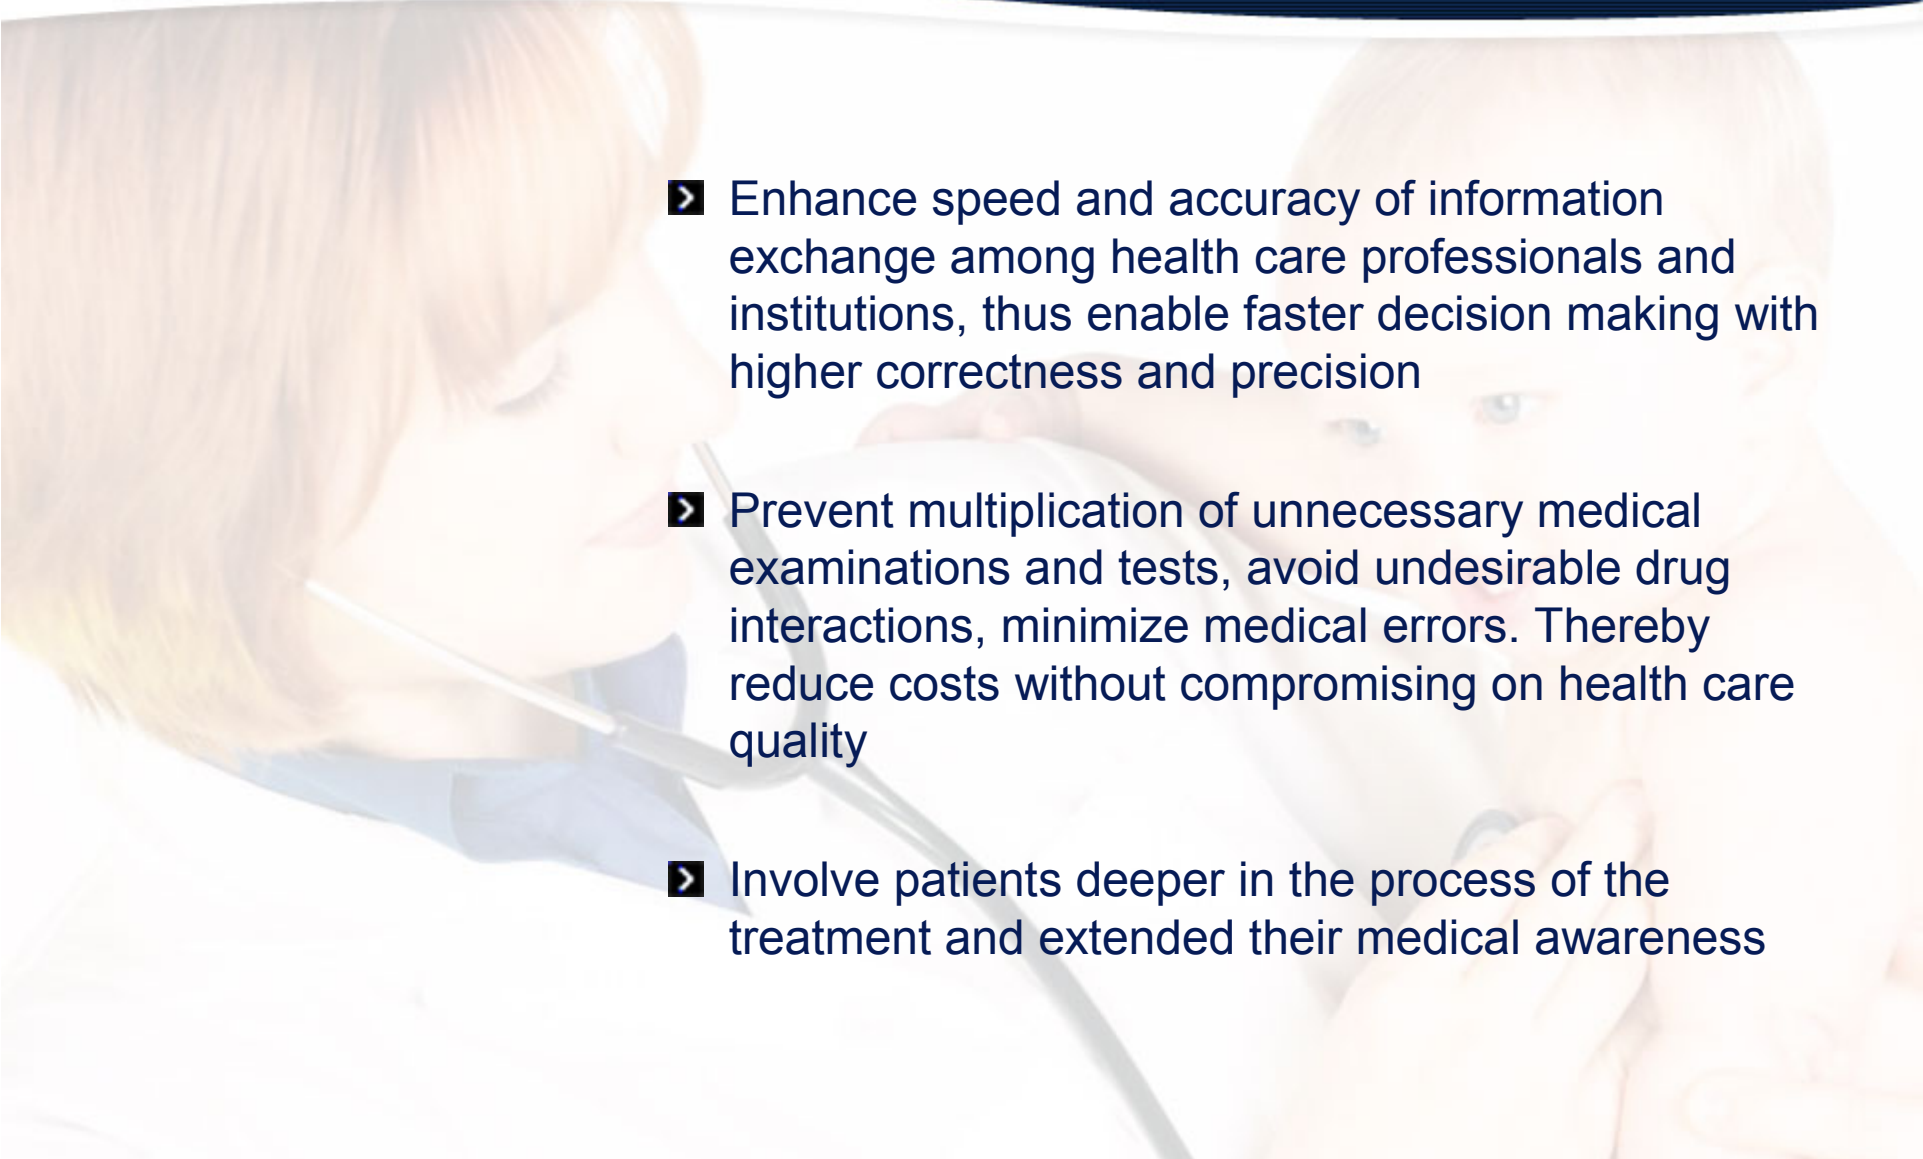

IZIP History

from individual EHR to public services

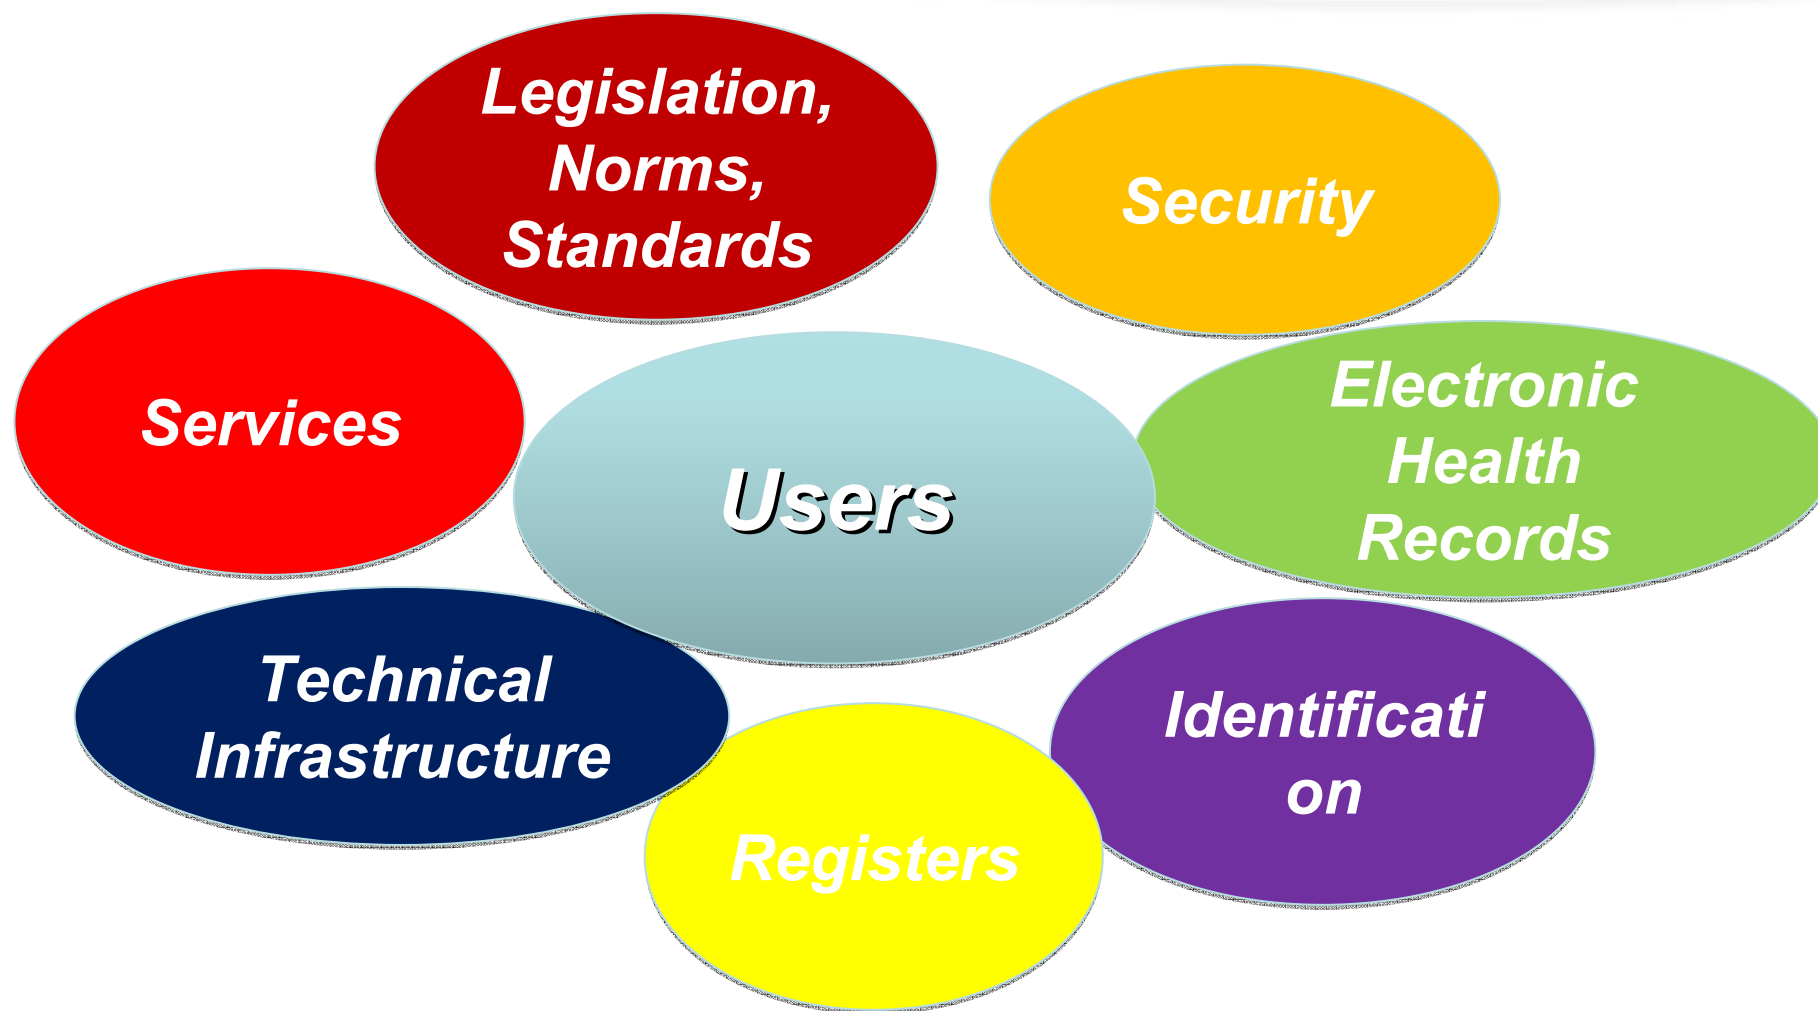

- 1999 – 2000
 - development of the concept and principal ideas similar to internet banking services
 - Search for strategic partners
- 2001
 - Establishment of the legal entity and structure
 - HW & SW development, security testing
- 2002 - 2003
 - Regional pilot real-life phase for testing of the interest of patients, health care professionals and managers
 - Testing phase of the data and speed capacity, HW and SW interoperability,
- 2004
 - Routine practice with deployment to all regions of the Czech Rep. and data collection
 - Linking to smart-cards
 - International recognition: eHealth awards, EHTEL, NICTIZ, ...
- 2005
 - Launching functional overlays: digital signatures, messaging, alarming, benchmarking, other statistics
 - The Best e-Content Product of the World (WSIS Award)
- 2006
 - Contractual and legal fixation
 - European recognition – reference EU project
- 2007
 - International project involvement: Health+, TEN4Health, DebugIT, epSOS
- 2008
 - Integration with public services: ePrescription, Czech Points

System IZIP Objectives

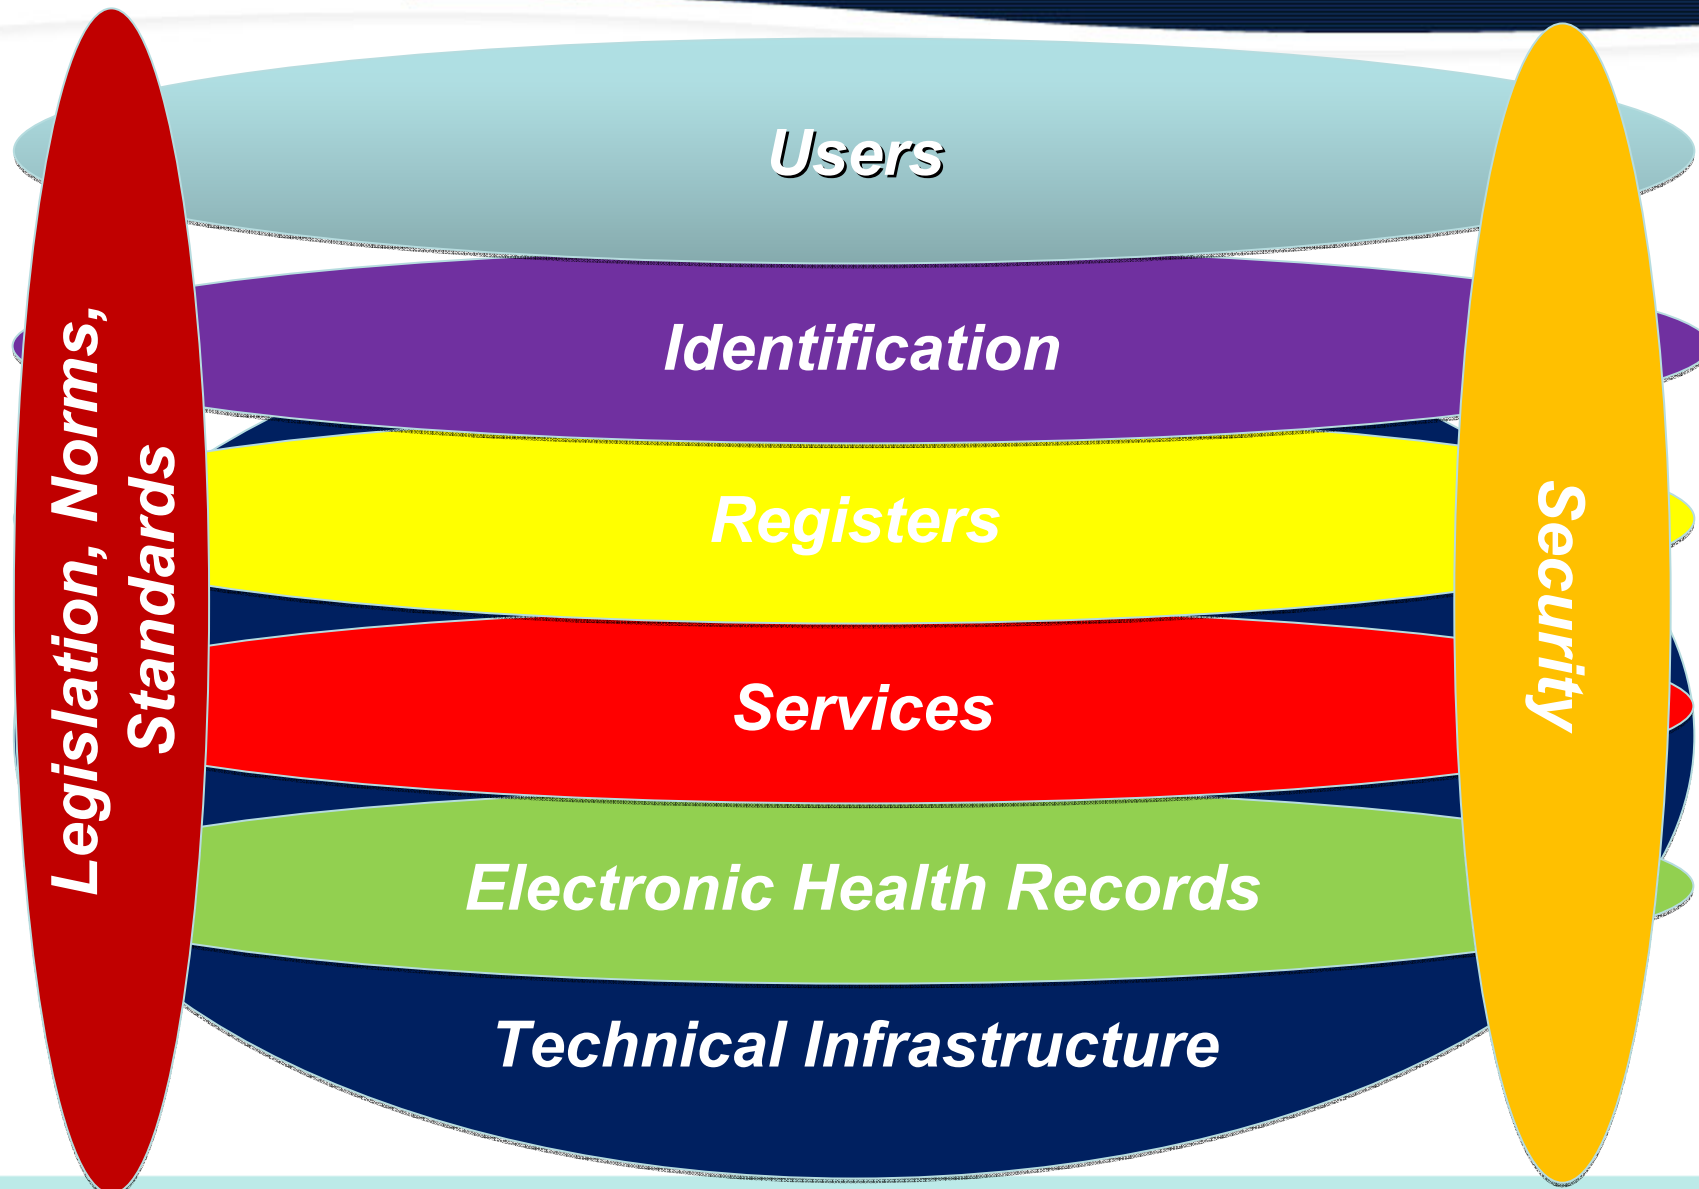

Improving Quality of Health Care Provided to Patients

- 
- Enhance speed and accuracy of information exchange among health care professionals and institutions, thus enable faster decision making with higher correctness and precision
 - Prevent multiplication of unnecessary medical examinations and tests, avoid undesirable drug interactions, minimize medical errors. Thereby reduce costs without compromising on health care quality
 - Involve patients deeper in the process of the treatment and extended their medical awareness

Environment for Implementation of eHealth services in the Czech Republic

eHealth „Architecture“

The IZIP Concept

Establishment of Electronic Patient Health Records

- Registered membership is required
 - patients
 - health care professionals
- Created on patient's/doctor's request – voluntary
 - with patient/doctor consent
- Accessible via secure internet
- Health care professionals (from hospital or/and outpatient, labs, pharmacies, etc.) registered in system IZIP are authorized for writing and uploading data in patients' health records/files
- Health records contain
 - medical history, diagnosis, results of lab and medical examinations, scans, conclusions, recommendations, therapy, medications,

Access Management

▶ For data upload or submission:

- All registered health care professionals
physicians, hospitals, laboratories, pharmacies...

▶ For data reading:

- Only the patient – the principal owner of the record
- Health care professionals authorized by the patient
- In cases of emergency, registered emergency physicians

Data Security

➤ Security elements according to patients' demand

- Unique identification number – social security number
- PIN code
- Personal passwords
- Digital signatures
- GSM tokens
- Biometrics (fingerprints)

➤ Security arrangements

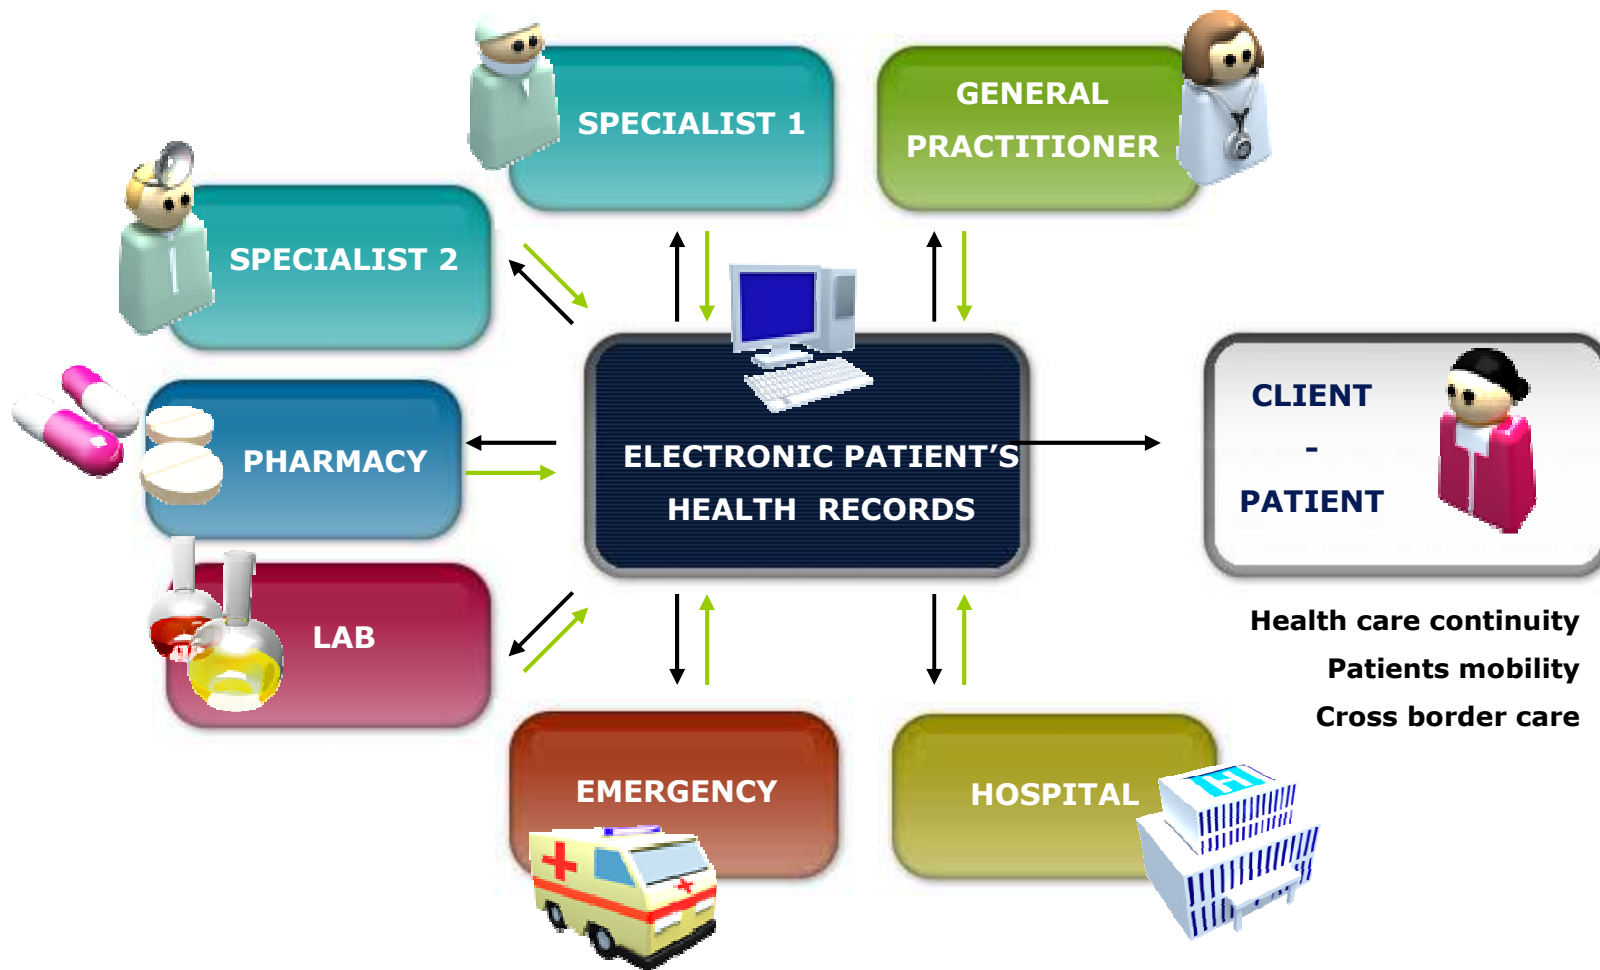

- SSL protocol, HTTPS
- Location, processes and physical security
- Systems: firewalls / special programs

➤ Utilizing electronic certificates and digital signature

- Authentications
- Authorizations

System IZIP Philosophy

Patient Centered

Current Number of Registered Users

➤ **Clients** **1.024.000**

➤ **Medical data entries** **9.300.000**

- Harmonized interfaces for direct data export from majority of information systems used in hospitals, labs, pharmacies and out-patient offices
- **Over 20 millions of prescriptions, 50 millions procedures, ...etc**

– **Health care professionals** **9.000**

– **Health care institutions** **5.500**

Use Case – Hundreds of Thousands

Patients Often Access Their Health Records

Period September 2008	No. per month
Registered clients	1 020 000
Clients' individual accesses	128 656

Health Care Professionals Accesses

Doctors Share Data with Patient's Consent

Period September 2008	No. per month
Registered Health Care Professionals	9 050
Individual accesses by HCPs	98 443
Total number of transactions	1 194 223

Human Factor Engineering

- Optimized for working, patient friendly,
- Chronological order
 - *Firstly the newest*
- New record highlighting
- Modes - *Preview / Detail / Print*
- Filters and Search
- Individualized system front-end (i.e. for emergency operators)

Technical Background

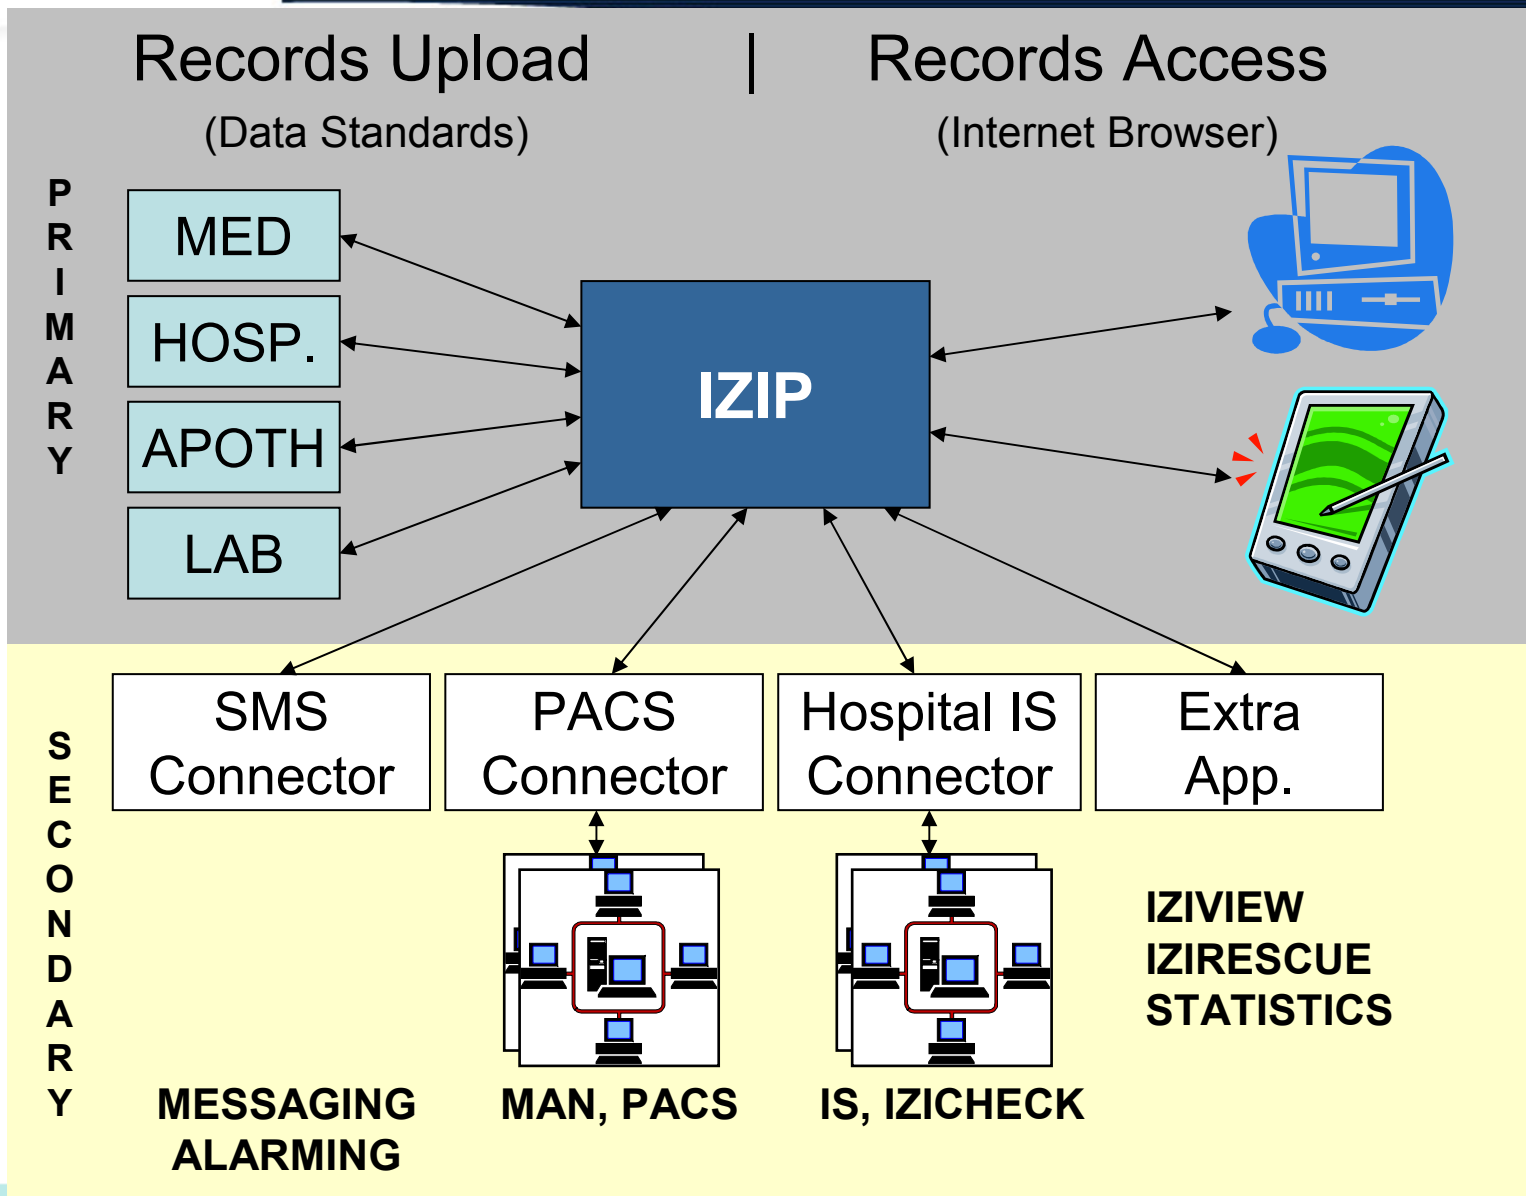

CORE DATABASE

- **Semi-centralized database**
- **ORACLE 10g, Microsoft, DB2**
 - High stability and security for personal sensitive data protection
- **Secured Data and Data-flows**
- **Modular-based conception**
- **3-stage information handling**
 - Collecting (grabbing) information
 - Parsing / Storing
 - Distributing (Views, Messaging)

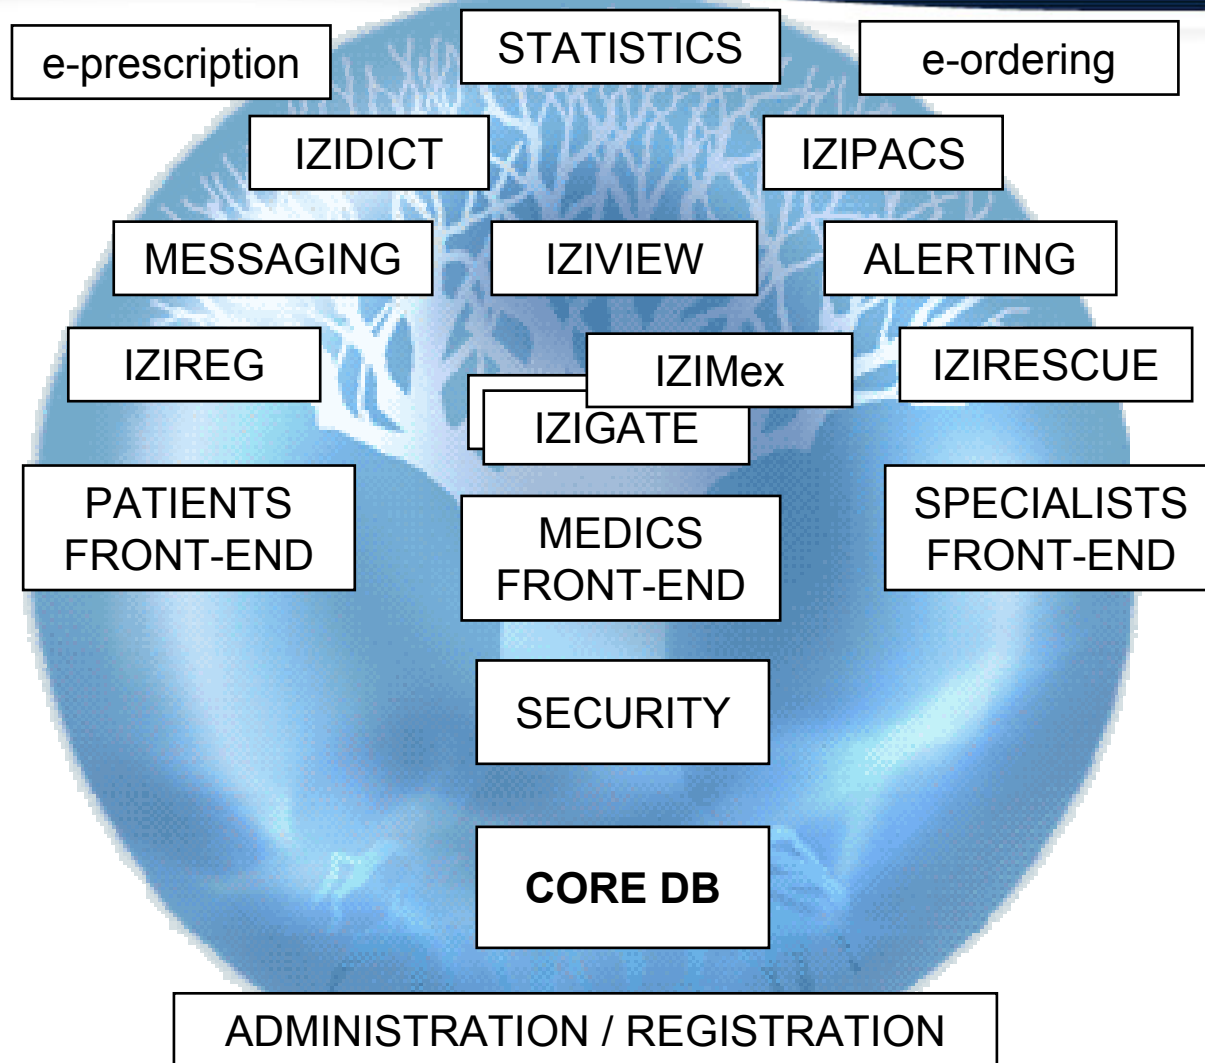

DATA STANDARD

- **HTTP, HTTPS, SSL, XHTML**
- **IE and Mozilla web browsers**
- **Flexible system**
- **Adapted to Czech conditions from current international & European data standard**

Data Flow

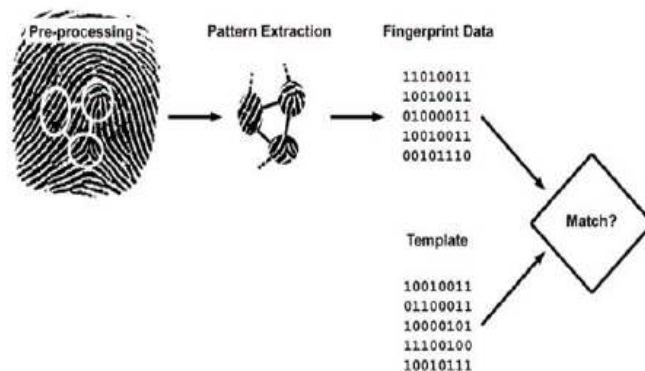

Tree of Functions

Utilization of Electronic Certificates, Digital Signatures and Biometrics

- Function
 - Access authenticity
 - Record authorization
- Benefits
 - Security element
 - Full-value legal validity of the records
 - Background establishment for electronic orders and prescriptions
 - Availability of the full-value on-line registration

Emergency Services

Utilization of Biometrics and Digital Signatures

- Intended for critical situation when correct and „on time“ information about patient’s health condition may significantly contribute to life saving
 - Case, when Emergency and Rescue Service is called out to patient or accident and casualty is unable to communicate - is the one when doctor is allowed to view certain part of the internet medical file of the casualty. Knowing the casualty’s medical file might be lifesaving
 - Pilot project of the internet medical files usage by Emergency and Rescue Service in East Bohemia
 - The ER doctor obtain special access code
 - Doctor identifies the patient according to his ID number
 - Enables reading of patient’s records even without his approval
 - The whole process is tracked and the inspection if the unauthorized access was reasonable is made
 - One of the main authentication elements is biometry – doctor thumb’s fingerprint

Statistics - Alarming

- Individual clinical and economical summary for
 - Managers
 - Doctors
 - Patients
- Anonymous statistic on-line data evaluation according to
 - Diagnosis
 - Drugs prescription
 - Indicated procedures

Statistics - Benchmarking

Annual Coasts and Benefits

Distribution of Benefits

**Health Care
Providing
Organizations**

Summary of Economic Performance

- ▶ **First year in which benefits exceed costs: 2005**
 - 3 years after start of full operation
 - 6 years after start of planning

- ▶ **First year in which cumulated benefits exceed cumulated costs: 2006**
 - 7 years after start of planning

- ▶ **Estimated net benefit in 2008: € 60 million**

Integration in Europe

- **TEN4Health Project**
EC support through eTEN
expansion of existing solution to other member states
facilitates the patients' cross-border mobility
- **Health+ Project**
Dietary recommendations based on clinical knowledge
- **DebugIT Project**
funded by EC under 7th Framework
IT against resistance of antibiotics
- **epSOS – Large Scale Pilot Project**
funded by EC under CIP
cross-boarder utilization of Patient Summary + ePrescription

IZIP System Delivers

➤ For patients

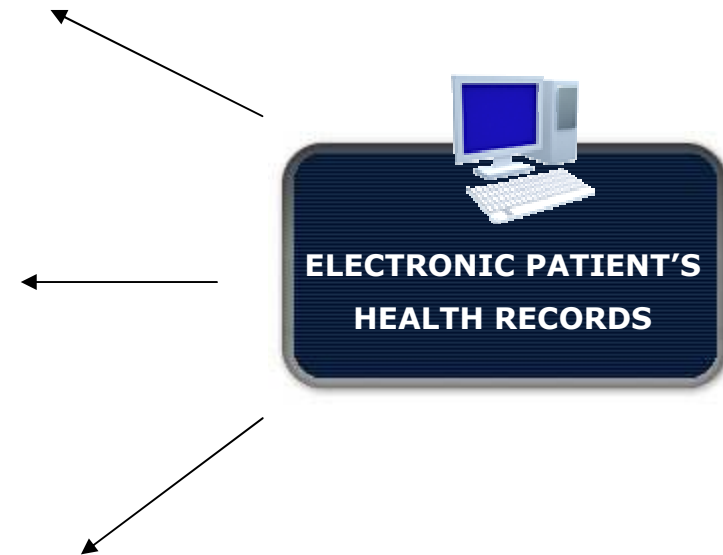

- Better and faster treatment
- Higher engagement, better awareness
- Messaging and Alerts
- Free choice and access to treatment across regions

➤ For health care professionals

- Relevant information on the right place and on time
- Faster diagnosis establishment
- Avoiding hand written errors
- Decision support
- ePrescription, Electronic requests and ordering,

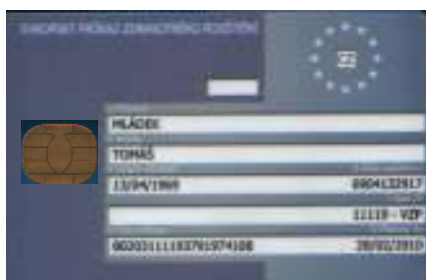

➤ For managers

- Minimization of unnecessary or doubled health care services
- Reduction of medical errors
- Anonymous statistics and “Flag up” alarms
- Benchmarking and comparative outcomes
- Open gate for e-prescription and chip cards utilization
