

SAP NetWeaver – Web Application Development Environment

Peter Vaníček SAP Slovensko

Many (Web) frameworks have been developed over the years

Example: Poll conducted at the TheServerSide Java Symposium 2005

→What is your preferred Web framework?

- ◆ Struts 47,0%
- ◆ Spring 20,9%
- Tapestry 7,9%
- Other 24,2%

Different frameworks for different usage types:

- Struts for scalability
- Spring for EJB-free magic
- Tapestry for light-weight
- JSF for reusable UI components
- Yet another Web framework from SAP???

Special SAP Requirements for a Web Framework

Librariesswithtstandard;complexiandigraphicalidal UI elementss

Predefinedlinterfaces tot backendrstystemsr(Web/eb Services, JavaBeans, XMI, IRREC,).)

Client independency y

Personalization/ adaptation for endrusersers

Interoperability

Web Dynpro

Web Dynpro is for User Interface design only!

Single channel between client and runtime

Client generates HTML and displays it without page reloads

Separation of model, view and controller

Web Dynpro Zoom-in: 10 x 10 x 10 x 10 x 10 x

View	View Controller
Layout UI Elements	Context
Departure Date 3/22/2002 Destination Image: Comparison of the second se	Controller Coding Actions public void onActionSelectRow(com.sap.tc.webdynpro.progmodel.api.
Nested Views	<pre>//@@begin onActionSelectRow(ServerEvent) //\$\$begin Enterprise Portal Eventing(-1895990454) WDPortalEventing.fire("urn:com.sap.test.demo", "CheckCreditLimit", wdContext.currentCustomerElement().getPartnerid());</pre>
The coding is in Java – everything else is platform independent	Methods Event handlers
	Error handlers

Steps in Building a Web Dynpro Application

Identify the backend for the application. Create a model for this backend or include an existing model.

- Consider which views belong to the same focus area. Divide the screen into view sets and view areas accordingly.
- Assign the views to view areas and draw the navigation paths between them.
- Identify all the tasks in the user interface. If possible, assign them to the views' controllers.

Step Group the tasks that cannot be Step

- attributed to any particular view. Add a custom controller for each group.
- Design the contexts for each controller and the mapping between the contexts, as well as between model and contexts.
- Define the layout for each view. Bind the layout elements against the view contexts.
- Code event handlers etc., first for the custom controllers and then for the view controllers.
- As an optional step, add special resource files (images, style sheets, etc.)

Editors and Views

- The Eclipse workspace consists of the set of imported projects
- Projects can depend on each other
- Create a new project: Use the "New" wizard in the top left corner of the workbench window
- Import an existing project: Use "File -> Import... -> Existing project into workspace" and select the project folder of the desired project

Projects II

- Projects can be opened and closed
 - Closed projects do not appear in all views
 - Use the context menue of the project (e.g. in the Navigator view) to switch between opened and closed state ("Open Project" resp. "Close Project")

■ Delete projects:

- Select "Delete" from the context menu of the project
- Choose if you want to remove the project from the workspace only or completely delete it from the filesystem
