Protection of the National Cultural Heritage in Austria

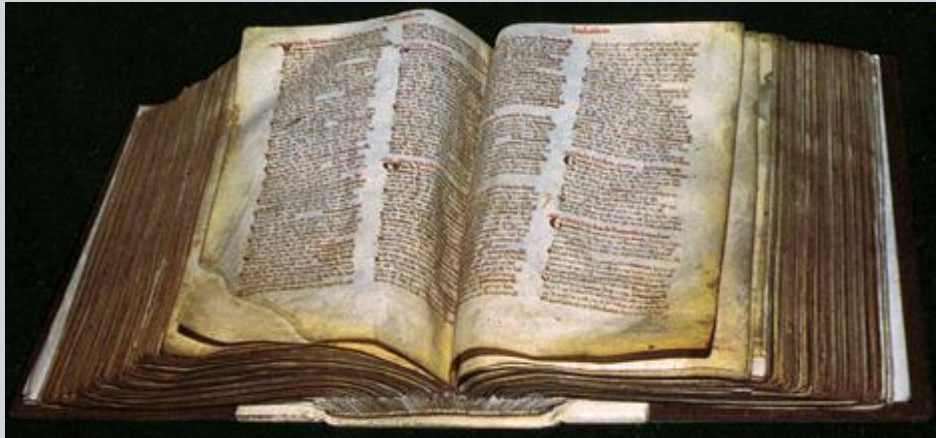

Mag. Alexander Leiningen-Westerburg
Siemens IT Solutions and Services

Nicola Conte di Hamilton Presidente

(L. J. J. J.)
Ind. (1760)

Per ordine della Suprema
e Consejo di Ammiragliata
Austriaco,
Giuseppe Marino Vozilla

The Domesday Book

© National Archives

Domesday Book

A survey of England completed 1086
... and still readable

The Domesday book project 1986

Modern digitalised version to celebrate the 900th anniversary

- Laserdiscs (LaserVision Read Only Memory)
- To be viewed only on BBC Master microcomputer
- Software written in BCPL

In 2002 only two devices were left to read the discs

Current trends and challenges

Situation	Solution	Benefits	References
High level of digitalization		<ul style="list-style-type: none"> To reduce costs authorities will implement digital records, workflow- and document management systems In some countries the electronic record is already the original one, print-outs are only copies The EU encourages their member states to preserve their digital heritage, which means to save their national top level domains regularly (domain harvesting) 	
Archives have to prepare for the digital world		<ul style="list-style-type: none"> Archives must archive administrative records by law <ul style="list-style-type: none"> Austrian laws require the archiving of the original files. Since 2004 the electronic file is the original! Preserving information in digital forms is much more difficult than preserving information in forms such as parchment, paper or audio files Public administrations must not only archive the electronic file but also the proceedings which generated the respective electronic record. 	
Preservation is the main challenge		<ul style="list-style-type: none"> Archives have to preserve data over centuries Preservation must combine policies, strategies and actions to ensure access to reformatted and digital born content regardless of the challenges of media failure and technological change. Documents must be protected from unauthorized access and change, technical loss and criminal attacks Hardware change and migration is another crucial issue 	

Public Archives have to **archive** digital data **forever**, to keep it **readable**, and **accessible**

National digital heritage

- According to the UNESCO the digital heritage consists of unique resources of human knowledge and expression. It embraces the following resources:
 - Cultural
 - Educational
 - Scientific } Web harvesting → National Library
- Administrative → Austrian State Archive
- Digital materials include texts, databases, still and moving images, audio, graphics, software and web pages, among a wide and growing range of formats.

The Austrian State Archive

- Central archives for the federal services of the Republic of Austria (supreme bodies and ministries)
- Collection of acts and charters of the Babenbergs and Habsburgs dating back to 816
- Keepers of the archival heritage of the
 - Habsburg Empire (1526–1918)
 - Holy Roman Empire of the German Nation (until 1806)
- 177,700 linear metres of shelves
- Library with 800,000 volumes
- They have to archive administrative records by law
 - In Austria since 2004 the electronic file is the original record
 - 8500 Users produce about 1 Mio files per year

Digital Archive – ELAK (Austrian document and workflow management system)

Long term archiving in the Austrian State Archives

- Digital Memory of the Republic
 - The Austrian State Archive has rewarded Siemens on 10th of December 2009 with the design, built and maintenance of the digital Long Term Archive of the Republic of Austria
- Archive lifetime
 - It shall last till the end of times or the end of the Republic
- Software
 - The software solution according to the OAIS reference model will be delivered mainly by Tessella plc (UK)
 - Siemens will deliver the national extensions and the webshop
- General license for the whole public sector
- Hardware
 - EMC Centera + renewal after 60 months
- Maintenance and Support
 - 8 years + automatic renewal

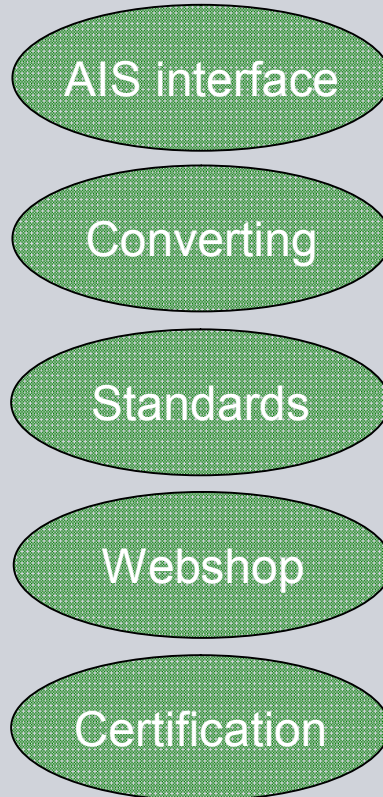

Targets

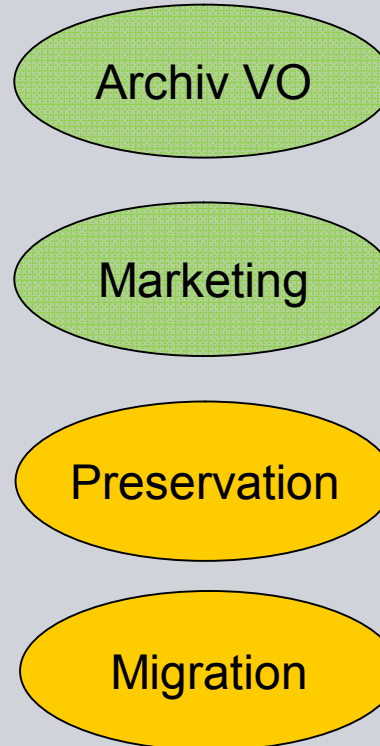

Main target

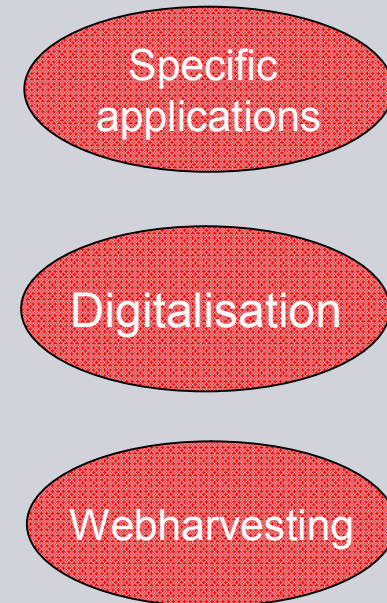

Other targets

Accompanying measures

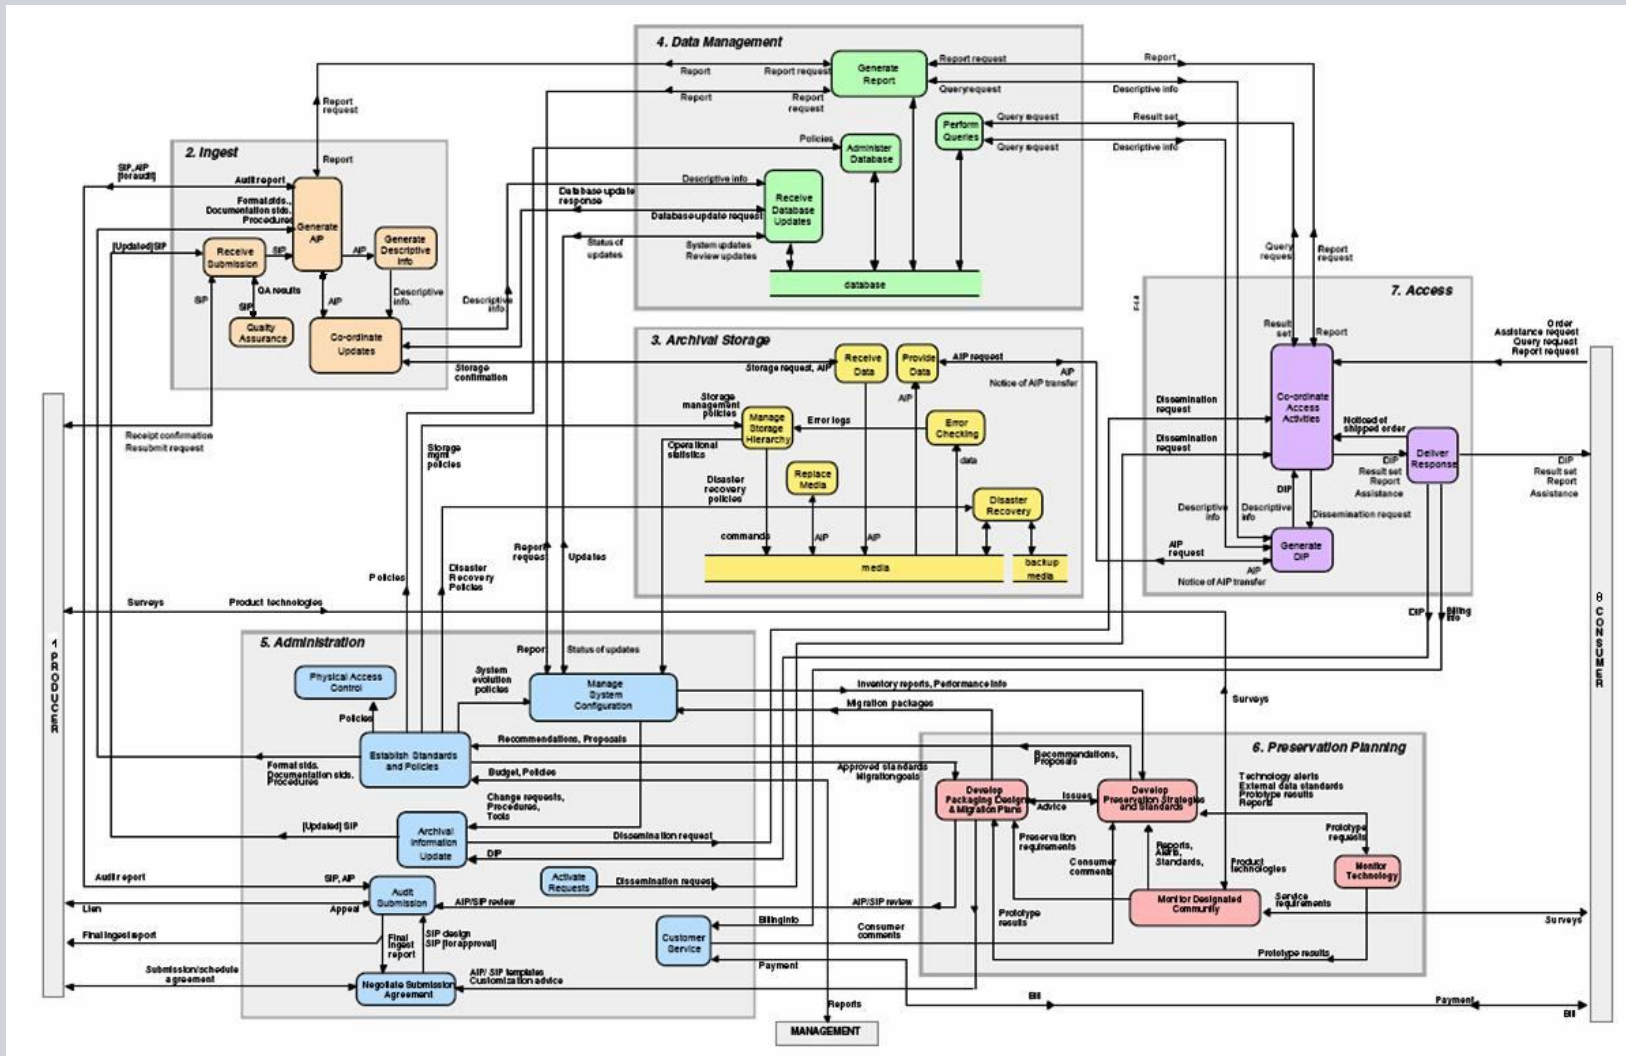

Presently out of scope

- **OAIS**
- EDIAKT II - Schema
- PDF/A (-1b)
- International standards
- Technical design
- Multi tenancy

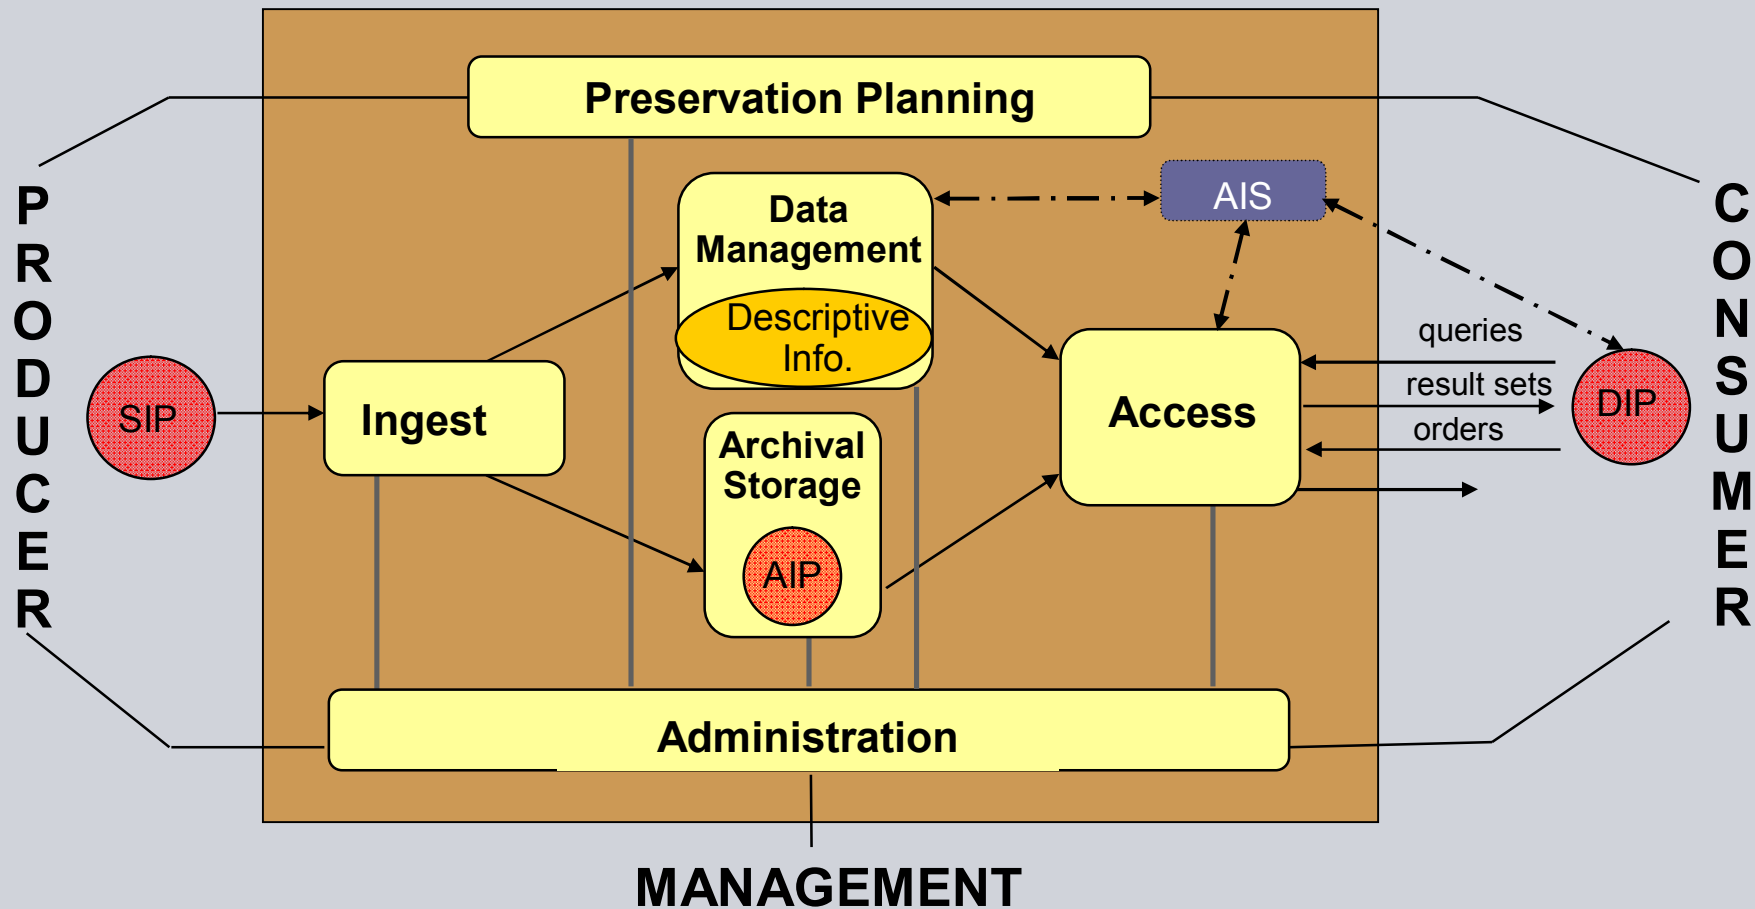

Open Archival Information System OAIS reference model (ISO 14721)

Open Archival Information System (OAIS)

SIP = Submission Information Package AIP = Archival Information Package DIP = Dissemination Information Package

- OAIS compliant archival software
- SOA Architecture – modular architecture allows cost efficient change of single modules
- Ready to go: The standard workflows allow you to use SDB as an archiving solution right out of the box
- Flexibility: The flexible workflows and open API allow you to create a solution to fully match your needs
- State of the art: The technology and processes on which SDB is based are right at the core of the international intellectual development of Digital Preservation best practice.
- Solution sharing: Each SDB user is able to share their workflows and especially their Digital Preservation steps with other SDB users.
- Annual SDB user group meeting – we listen to your needs and expectations
- Designed using experience: SDB is based on many years of delivering Digital Archiving solutions and adopts the lessons learnt from producing real systems to different customers.
- World Leading Active Preservation: SDB contains the most advanced approach to Digital Preservation available.
- Flexible Storage: SDB can be used with any storage system available

- EDIAKT = Electronic Data Interchange Format
<http://reference.e-government.gv.at/uploads/media/ediakt-II-1-1-0-2005-1214.pdf>
- XML-Schema for the interchange of electronic files (out of an ELAK system) all across Austria
- EDIAKT-Creator und -Viewer
- EDIAKT-Interface in the Ingest
- EDIAKT = Dissemination information package (DIP)

- ISO-Standard ISO/CD 19005-1
- Currently PDF/A-1b (2au)
- Conversion is part of the project
- In the process of assembling an EDIAKT-package the content will be converted into PDF/A

Other international Standards

- PDF/A - ISO-Standard ISO/CD 19005-1
 - Text should be migrated to PDF/A for long term storage
- PREMIS (**P**reservation **M**etadata: **I**mplementation **S**trategies)
 - Recommendations, propositions and best-practices for the implementation of metadata
- METS (**M**etadata **E**ncoding and **T**ransmission **S**tandard)
 - Standard for encoding descriptive, administrative, and structural metadata regarding objects within a digital library, expressed using XML
- PLANETS (**P**reservation and **L**ong-term **A**ccess through **net**worked **S**ervices)
 - An EU project, whose primary goal is to build practical services and tools to help ensure long-term access to our digital cultural and scientific assets.
- MoReq2 (**M**odel **R**equirements for the Management of Electronic Records)
 - consists of a formal requirements specification for a generic electronic records management system, accompanied by testing documentation and related information. MoReq2 is generally considered a de facto standard, in Europe, but it does not have any formal status as a standard.
- EAD (**E**ncoded **A**rchival **D**escription)
 - XML standard for encoding archival finding aids, maintained by the Library of Congress in partnership with the Society of American Archivists.

Operation set-up

2 Locations:

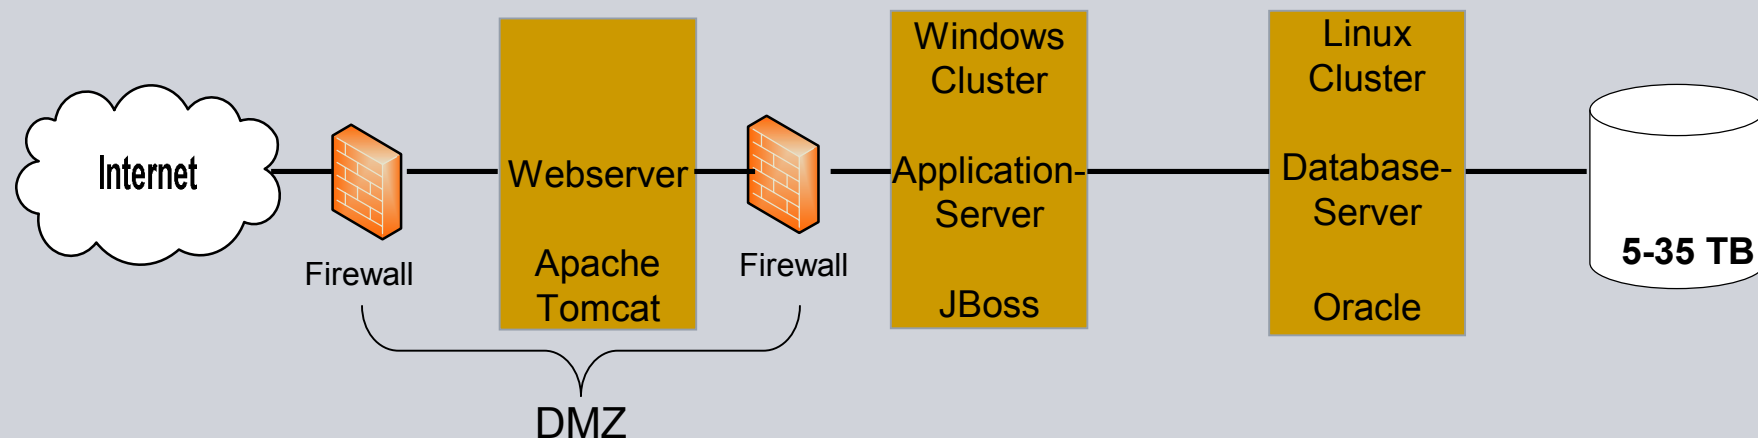

- Siemens AG Vienna
- St. Johann im Pongau

System software:

- Linux (Red Hat Enterprise Linux) and Microsoft Server 2008

Hardware:

- Intel X86 compliant single- and multi-processor engines
- EMC -Centera

Security

Data privacy concept

Data security concept

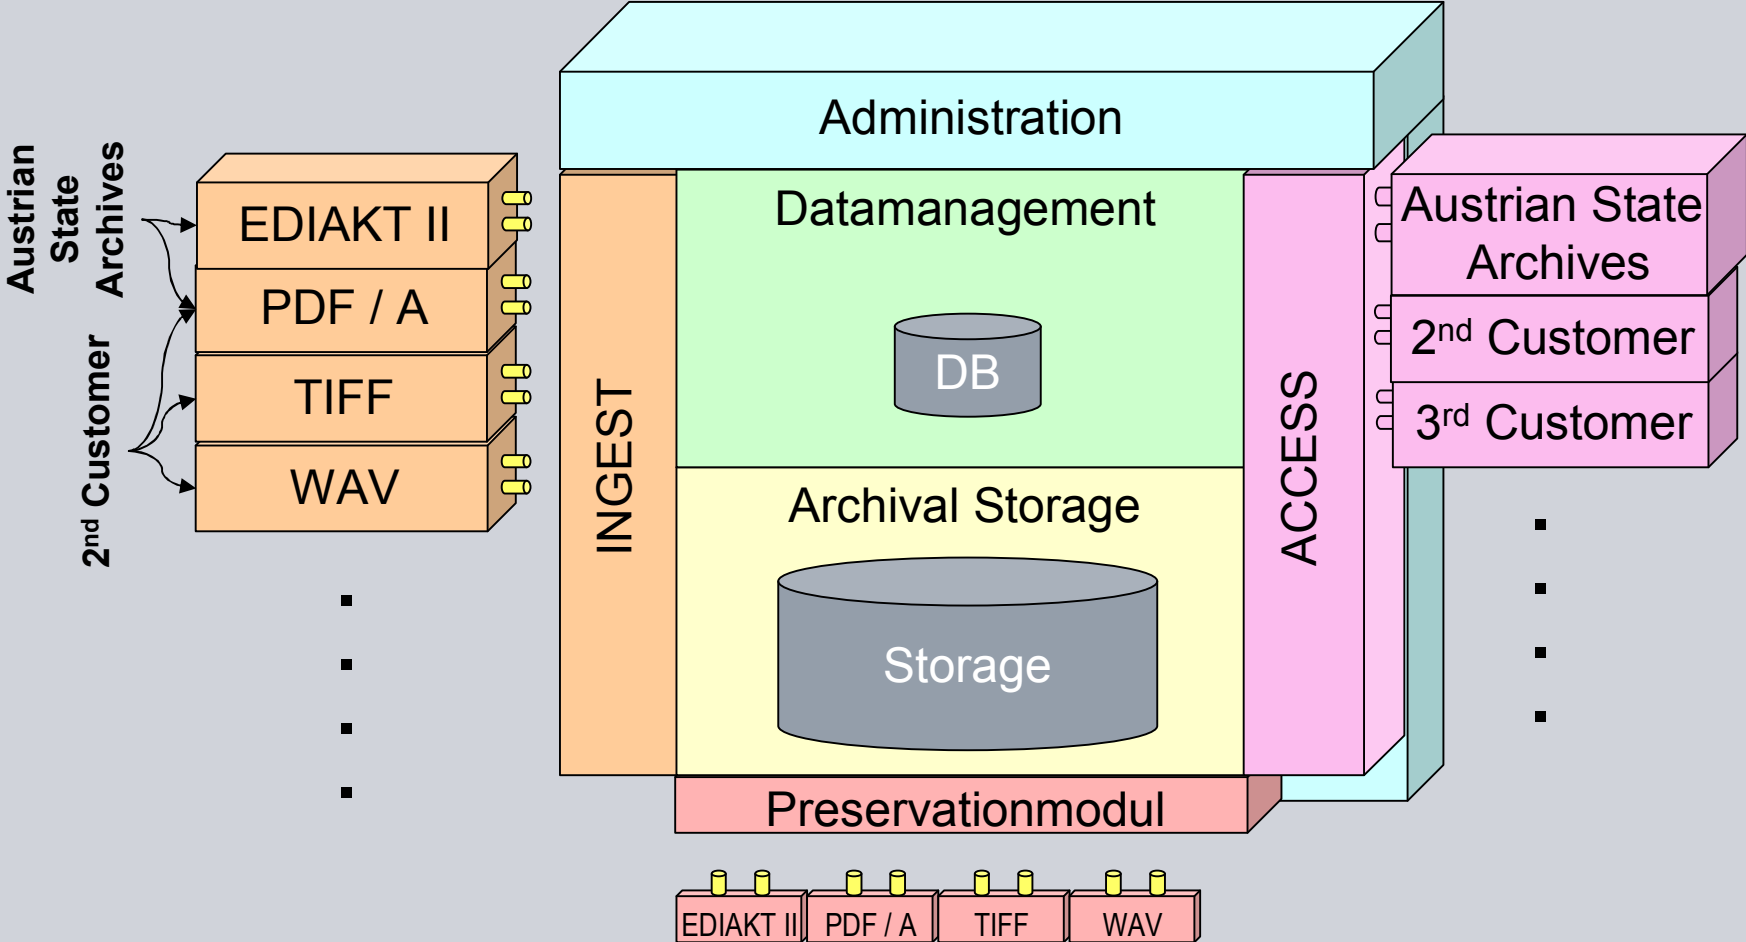

Security analysis

IT-Security concept

Operation concept

Any loss or tampering of information within the digital archive MUST be prevented.

Multi-tenancy

Advantages of a multi tenant solution

SIEMENS

Financial benefits

- Further developments and Change requests can be divided into between more partners
- One licence for all Austrian public authorities
 - No further tender required
 - Operational synergies

Organisational Synergies

- SDB User Group

Digital long term archive - creates benefits in all three dimensions: service quality, cost, security

Benefits of the Long Term Archive

- Standard software based on international standards
- Easy search for data and metadata
- Easy change of software modules and hardware
- Preservation strategies and migrations are supported by our software

- No printouts and media conversions necessary
- No costs caused by data loss
- According to the Austrian Federal Chancellery digital archives cost only one third of a paper archive

- Improved data protection and security
- Electronic signature to ensure authenticity and integrity
- Sophisticated IAM system
- Data storage and - if necessary - migration is done by experts

Service quality

Cost saving

Security

Long term archive
