Insilico Medicine

An artificial intelligence (AI) drug discovery company founded in Baltimore, Maryland, in 2014

250+ employees worldwide with 70+ AI scientists, 60+ drug hunters and 140+ scientists

Headquarters in Hong Kong, and offices in the US, Europe and Asia

Raised **\$ 395 million** in capital

At a Glance

Main AI strengths: development of **Generative Algorithms** and **Deep Learning techniques** for drug discovery and development

150+ peer-reviewed research papers since 2014

Develop AI-driven software platform – **PHARMA.AI**

Target discovery using omics, text and financial data

De novo design of **Novel Molecules**

Predicts **clinical trial outcomes**

30 Internal programs against 17 targets: 1 in Phase I, 8 at PCC

Insilico Medicine 1 of the **top 100 AI companies** in the world (CB Insights 2022)

Generative AI for de novo drug design

- ✓ GAN-based platforms
- ✓ Transformers
- ✓ Autoencoder-based models
- ✓ Language models (RNN-based)
- ✓ Genetic algorithms
- ✓ Combinatorial approaches
- ✓ Ensembles

All methods are combined with the Reinforcement Learning (RL) optimization, then integrated into unique end-to-end pipeline.

World Class Management Team with Deep Expertise in AI and Drug R&D

Alex Zhavoronkov, PhD
Founder & CEO

- 20 years experience in IT, HPC, bioinformatics
- Former Director, ATI Technologies (acquired by AMD for >\$5bn)
- Former Adj. Professor, MIPT
- 150+ publications, 2 books
- B.S. from Queen's University, M.S. from Johns Hopkins University, PhD from MSU

Feng Ren, PhD
CSO & Co-CEO

- 14+ years experience across Pharma and CROs in both US and China
- Former SVP & Head of Drug Discovery Service, Medicilon
- Former Director & Head of Medicinal Chemistry, GSK, ND DPU
- PhD from Harvard University
- 30+ peer-reviewed publications

Alex Aliper, PhD
President

- 15+ years experience in Bioinformatics and Deep Learning
- Former Senior Bioinformatics Scientist, CPHOI
- Formerly with GeneGo (acquired by Thomson Reuters)
- 50+ peer-reviewed publications
- Endpoints "The 20 under 40 in Biopharma"
- PhD from SRC IBR

Nirav Jhaveri, CFA
Chief Financial Officer

- 15+ years experience in Finance
- Former CFO, Journey Medical Corp.
- Former VP of Business Development, Fortress Biotech
- Former analyst, equity research, Citigroup
- BA from University of Pennsylvania, MBA from NY

Michelle Chen, PhD
Chief Business Officer

- 20+ years experience in BD
- Former SVP of Corp Dev and Discovery BD, WuXi Biologics
- Former Executive Director, Business Development & Licensing, Merck
- Former Global Oncology Business Development Director, Roche
- PhD from University of Washington, Post-doc from UCSF

Surata Rao, MD
SVP- Head of Clinical Development

- 30+ years experience in extensive clinical development, academic and medical practice
- Former AVP of Global Clinical Development, Eli Lilly
- Former Immuno-Oncology Medical Leader and Oncology Scientific Advisor, Bristol-Myers Squibb
- Former Sr. Medical Director, Onyx (Amgen)
- MD from Jacobs School of Medicine and Biomedical Sciences

Advisory Board Comprised of AI Experts, Biologists, Chemists and Drug Hunters

Charles Cantor, PhD
Co-founder of Sequenom,
Professor, Boston University

Expert in Genomics
Former Principal Scientist
of Human Genome Project

Michael Levitt, PhD
Professor, Stanford University
Professor, Weizmann University

Expert in Computational Biology
and Structural Biology,
2013 Nobel Laureate in Chemistry

Kai-Fu Lee, PhD
Chairman and CEO, Sinovation Ventures,
President, Sinovation Ventures
Artificial Intelligence Institute
Expert in Artificial Intelligence

Alán Aspuru-Guzik, PhD
Professor and Director,
Vector Institute, University of Toronto,
Former Professor, Harvard University

Expert in Generative Chemistry
and Quantum Computing

Klaus Witte, PhD
Co-founder of Sequenom,
Member of the German Society of Pharmacology
& Toxicology, Member of the Ethics Commission II,
University of Heidelberg

Expert in Genomics, Former Principal Scientist
of Human Genome Project

Stevan W Djuric, PhD
Adjunct Professor at the University of Kansas,
Former Vice President AbbVie

Expert in Medicinal Chemistry Technologies,
Immunoinflammatory Disease Research

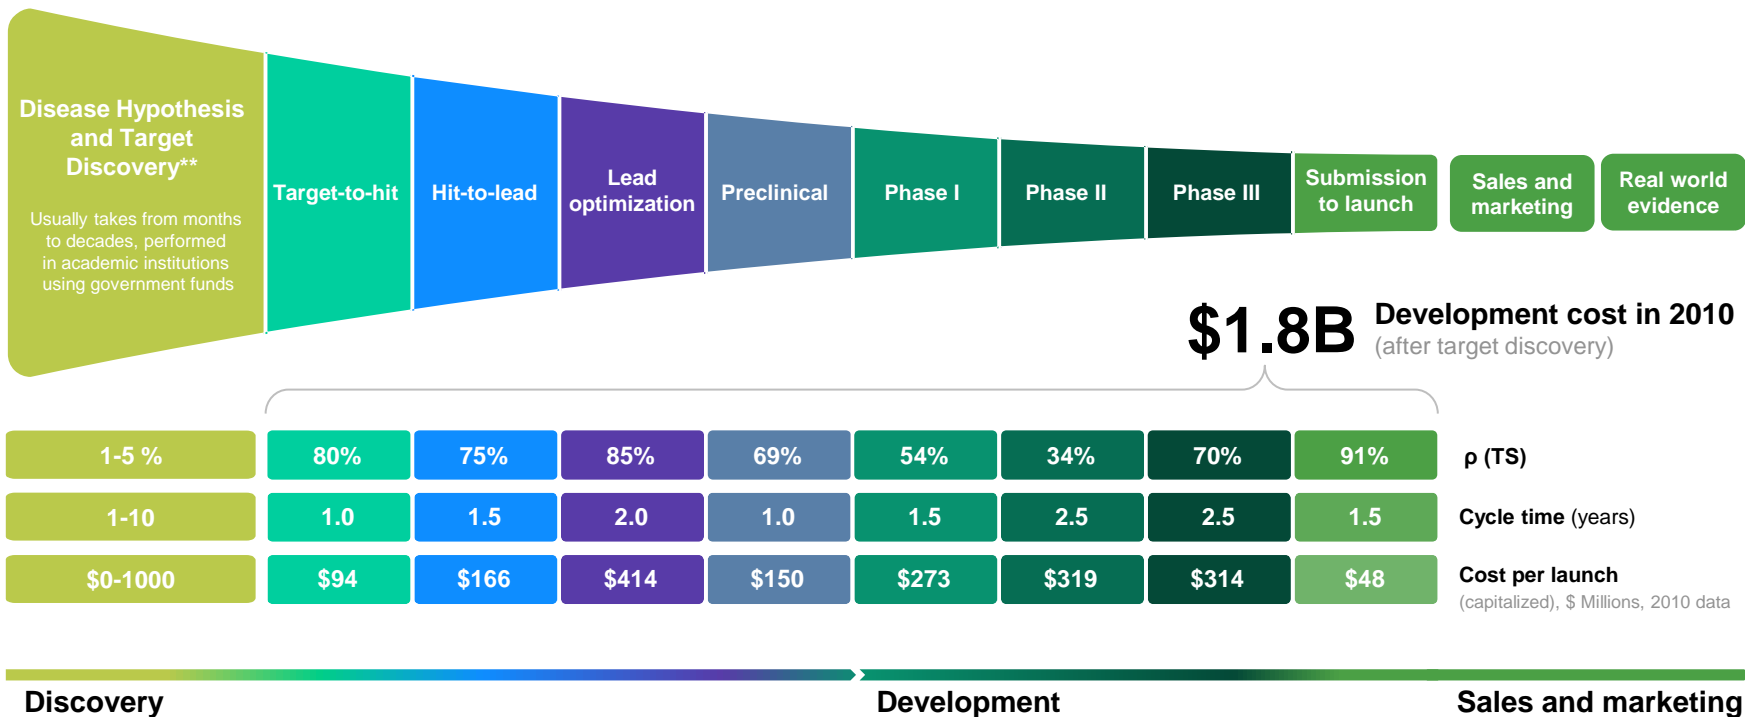

Bud Mishra, PhD
Professor at the Courant Institute,
Mathematical Sciences, New York University
Computer Scientist,
ISI highly cited researcher in Computer Science

Donald Small, MD, PhD
Director of Pediatric
Oncology and Professor,
Johns Hopkins Medical Institute (JHMI)
Expert in Pharmaceutical Research
in Target Discovery

Traditional drug R&D takes >10 years and >\$2.0B

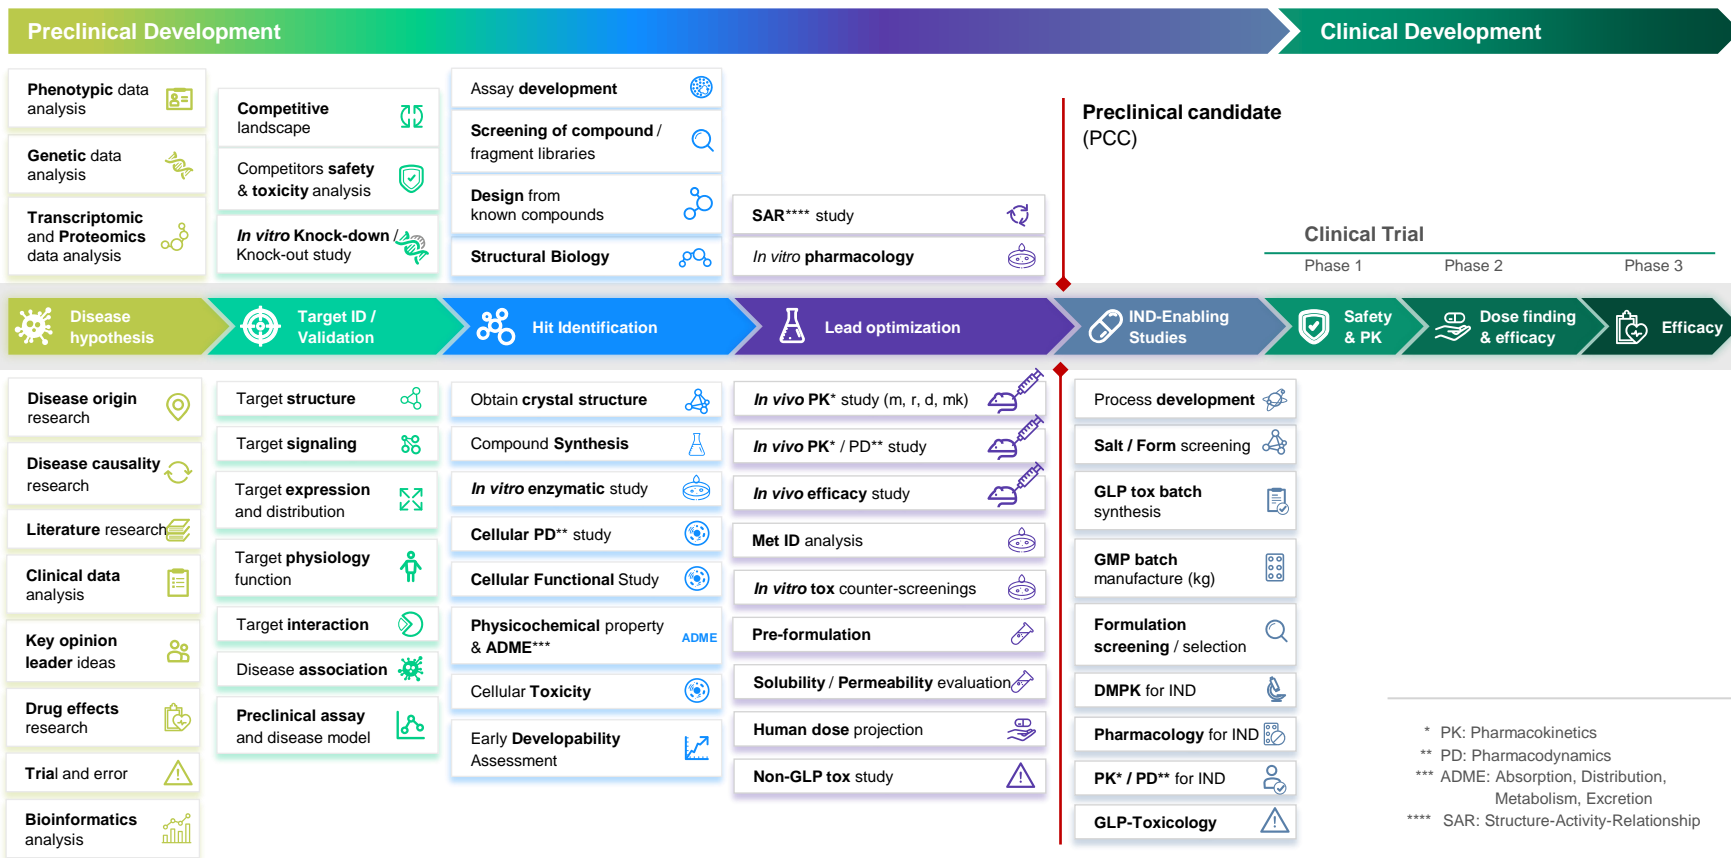

for a novel drug from discovery to launch (in 2010 and constantly increasing)

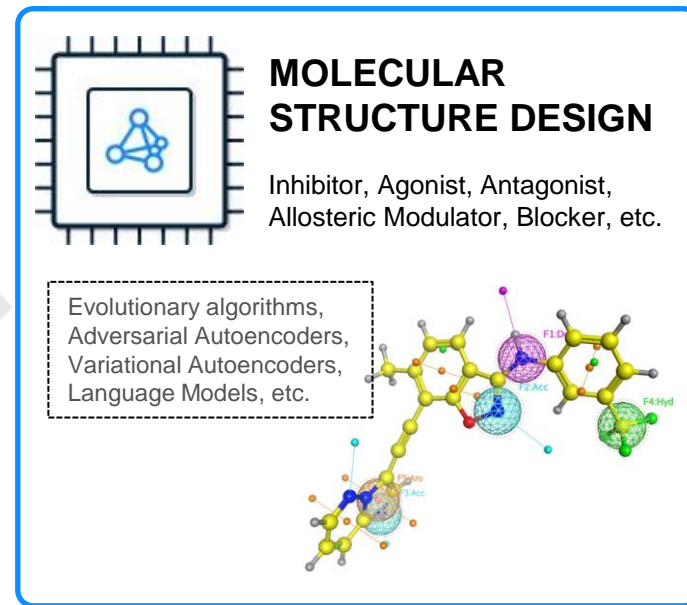

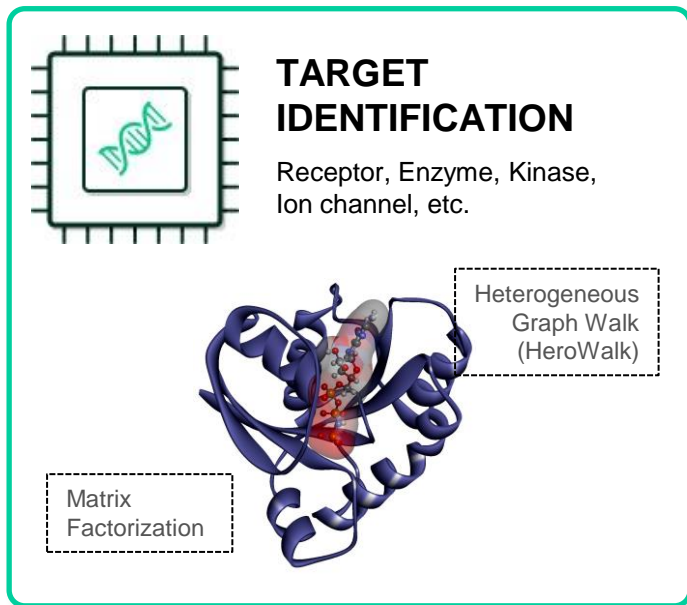

* Modified from Paul et al, How to improve R&D productivity: the pharmaceutical industry's grand challenge. Nature Reviews Drug Discovery , 2010

** Based on interviews with the pharmaceutical industry executives

Traditional Drug Discovery Process: Expanded

Drug Discovery Process at glance

<https://visualonline.cancer.gov/details.cfm?imageid=11166>

* Yan et al. Enhancing Molecular Shape Comparison by Weighted Gaussian Functions. *J. Chem. Inf. Model.* 2013, 53, 1967-1978

Can we **link biology and chemistry**
to improve patient outcomes?

Can **AI** come up with
a **Novel Target AND Novel Molecule**
for a **broad disease with no cure**?

PHARMA.AI – End-to-End AI-powered Drug Discovery

pandaOmics

Chemistry42

**OMICs Research,
Target Identification,
Biomarker Identification**

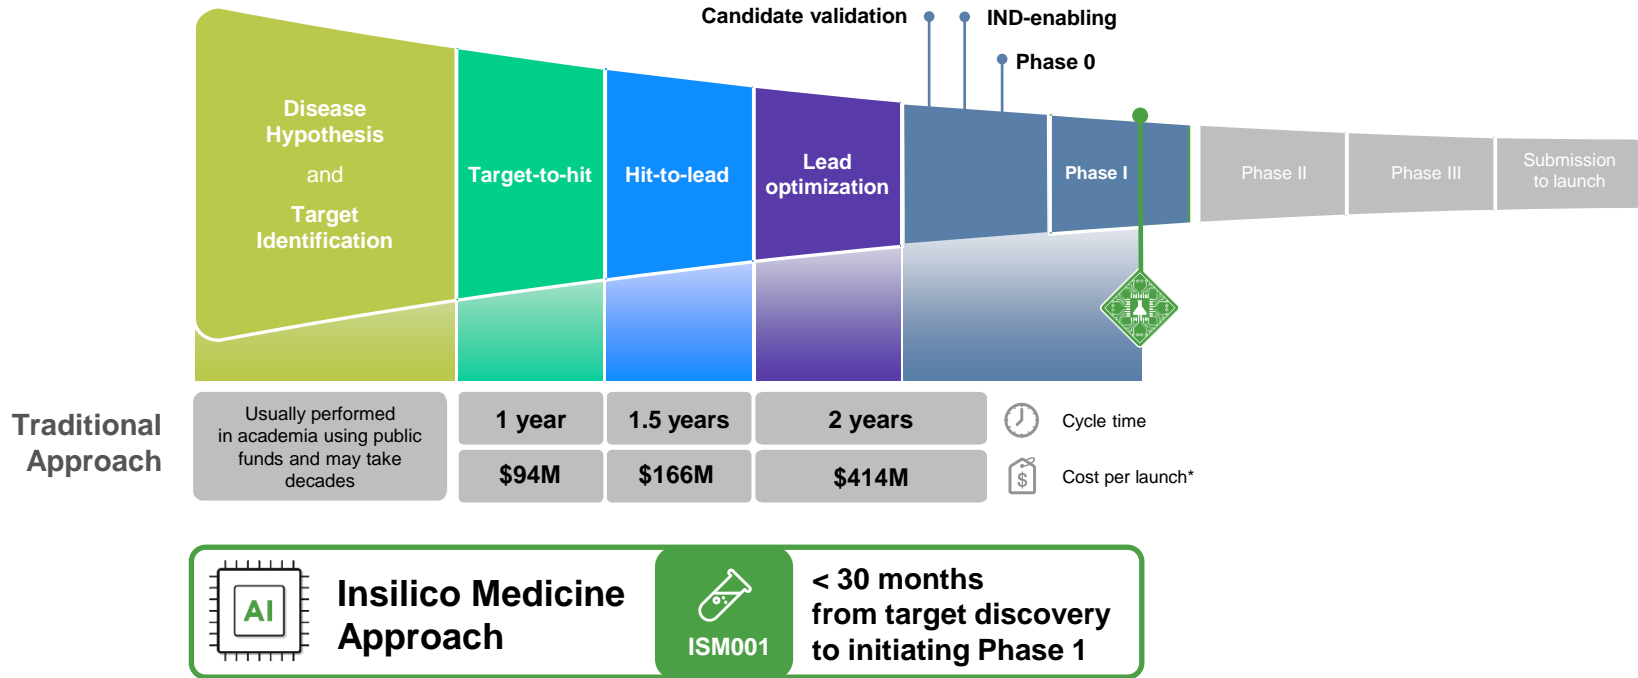

***De novo*
Small Molecule Generation
and Virtual Screening**

**Clinical Trial
Outcomes Prediction**

1st example:

AI-Discovered Novel Target and AI-Designed Novel Anti-Fibrotic Small Molecule with Multi-Purpose Target in Phase I in 30-months

* The cost per launch was capitalized in 2010, and is increasing

2nd example:

Consortium of Researchers Used Different AI to Discover a Potential New Cancer Drug in Less than a Month

✓ Potent hit molecule, **ISM042-2-048**, was discovered with an average Kd value of 566.7 ± 256.2 nM ($n = 3$) and an average IC_{50} value of 33.4 ± 22.6 nM ($n = 3$).

✓ Good anti-proliferation activity in an HCC cell line Huh7

✓ Didn't induce indiscriminate cyto-toxicity

pandaOmics

Broaden data analysis and Visualization horizons

- Decipher published OMICs data
- Analyze OMICs data type
- Discover and evaluate novel drug targets
- Uncover novel strategies for drug repurposing

Targets with
AlphaFold-predicted
structures

Targets with
experimental-determined
structures

DARK TARGETS

With no experimental structure

First-in-class scenario

CDK20

Chemistry42

Explore uncharted chemical space

- Experience the power of an automated end-to-end machine learning platform
- Discover novel and diverse molecules for target of interest
- Leverage structure- and ligand-based drug design strategies

**Molecule
Synthesis**

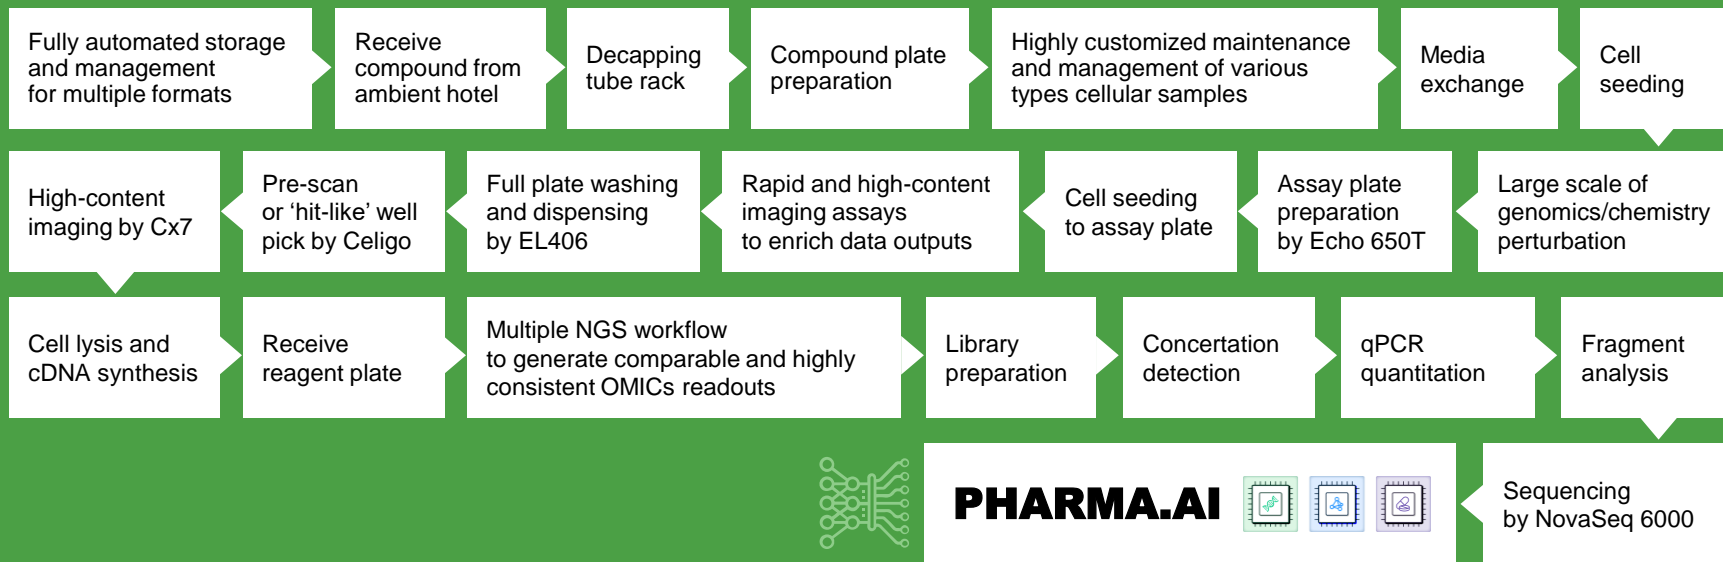

**Bioassay
Testing**

Closed Loop Biotech Innovation: Fully-Automated Pharma R&D

What does it all mean for the patient and the healthcare?

Better medicines
faster and cheaper

New treatments for diseases
labelled as 'Unmet Medical Needs'

More therapeutic options,
potential to combine different
treatment for better outcomes

Targeted therapies through
precise biomarker stratification
of patient population

Easier repurposing of existing
and approved drugs for new
diseases

Precision and eventually
personalised medicine
accessible to everyone
